```

```
#####  
# I encourage you to download 'fdemo1.f', compile it,  
# and run it INTERACTIVELY yourself. You should see  
# output essentially identical to that shown below.  
# Note, however, that both because I'm lazy, as well  
# as to illustrate the use of I/O re-direction, I have  
# previously prepared a file called 'INPUT', which  
# contains many lines consisting of a single character  
# These lines will be read by the 'prompt' subroutine  
# which, when run interactively, writes a prompt to  
# stdout and then waits for input from stdin.
```

```
#####
```

```
newton 23> head -10 INPUT
```

```
